WIRELESS SOLUTIONS

Wireless communications solutions that improve the quality, efficiency and speed of care

A customized Bell Wireless LAN solution connects communications devices—laptops, PDAs, computers—to provide real-time, anytime, anywhere access to critical medical data.

Applications include:

- electronic data entry and viewing of patient records
- real-time access to lab results
- submitting and controlling prescriptions electronically
- monitoring the vital signs of remote patients or patients in transit
- ordering supplies through a bar code scanner
- tracking the location of patients, staff and mobile equipment
- management of meals and bed status and availability

Customer Testimonial
